***Reasons for Allowance***

1. Claims 1-4, 7-27 will be allowed.
2. The following is an examiner's statement of reasons for allowance.

The prior art references most closely resembling the applicants claimed invention is Bian et al (U.S. 7,509,656) and Dongarra et al (University of Tennessee-Knoxville "Using PAPI for Hardware Performance Monitoring on Linux Cluster").

First, Bian disclosed application program interface (API) reads a count value from a hardware counter in a network device. Then, the API resets the hardware counter and uses the count value to update a software counter. The software counter is stored in a memory location corresponding to the hardware counter. However Bian failed to disclose, "automatically assign, with the counter provider application process, an access function for retrieving performance counter data from the performance counter structure, the access function enabled to be invoked via the operating system by the performance counter consumer application process; and during a run-time of the performance counter provider application process, register a performance counter provider dataset including referencing the description from the depository via a GUID (globally unique identifier) of the performance counter provider application process; and provide a counter query function called by the performance counter consumer application process and enabled to: extract the GUID of the performance counter provider application process from the repository". These limitations are incorporated into all of the independent claims (claims 1, 9, 17, 25, 26, 27).

Second Dongarra disclosed APIs that provide counts from hardware counters to applications. Dongarra's counts relate to hardware performance, are generated by hardware counters and are provided to performance count consumers via Dongarra's

Art Unit: 2445

APIs. However Dongarra failed to disclose, “automatically assign, with the counter provider application process, an access function for retrieving performance counter data from the performance counter structure, the access function enabled to be invoked via the operating system by the performance counter consumer application process; and during a run-time of the performance counter provider application process, register a performance counter provider dataset including referencing the description from the depository via a GUID (globally unique identifier) of the performance counter provider application process; and provide a counter query function called by the performance counter consumer application process and enabled to: extract the GUID of the performance counter provider application process from the repository”. These limitations are incorporated into all of the independent claims (claims 1, 9, 17, 25, 26, 27).

In summary, the Examiner submits that Bian and Dongarra taught all the limitations of independent claims in combination with other elements. Specifically prior art does not teach “automatically assign, with the counter provider application process, an access function for retrieving performance counter data from the performance counter structure, the access function enabled to be invoked via the operating system by the performance counter consumer application process; and during a run-time of the performance counter provider application process, register a performance counter provider dataset including referencing the description from the depository via a GUID (globally unique identifier) of the performance counter provider application process; and provide a counter query function called by the performance counter consumer application process and enabled to: extract the GUID of the performance counter provider application process from the repository.; therefore, claims 1-4, 7-27 have been deemed allowable over the prior art.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Adnan Mirza whose telephone number is (571) 272-3885. The examiner can normally be reached on Monday through Friday from 9:30 A.M. to 6:00 P.M.
